*Note 1:* The Fund operates full equalisation arrangements in the period ended 30 November 2016 and the 'average' equalisation factor for subscriptions in the relevant period for each relevant share class of the Fund is summarised in the above table. The Fund calculates the equalisation amount per unit of interest in the fund by dividing the sum of all the equalisation amounts in relation to all acquisitions by way of initial purchase in the relevant 2016 period by the total number of shares acquired by way of initial purchase in the same relevant 2016 period.

*Note 2:* We understand that the Fund meets the qualifying investments test within Part 6 of the Corporation Tax Act 2009 for the period ended 30 November 2016 and therefore is a "bond fund" for the period ended 30 November 2016. As such, we would expect that actual distributions and excess reported income over actual distributions from the Fund for the period ended 30 November 2016 to be treated as interest income for UK tax purposes.
